

Shower enclosure DJ-c-90 biewP

WING DOOR

Product number: 600-013-1931-01-520

During choosing a shower door, we should pay attention to these parameters, which will later affect the comfort of use. It is worth checking whether the shower door can be installed in either the right or the left version, or have a displaced pivot point, which is important in small bathrooms and whether they have adjustable wall profiles that allow you to level the curvature of the wall. All these features have a swing door DJ-c Classic series, which has a wide range of dimensions. This ensures the selection for many bathrooms. A solid construction that has been appreciated for many years by a group of clients. It is a good solution for creating a showering space in the recess.
